

## 12 volt battery conversion kit

Complete set of parts and detailed fitting instructions  
for a conversion to either a size 063 or 065 12 volt battery

### Why is the conversion worth doing?

Battery technology has moved on in the 30 years or more since the MGBGTV8 was launched in 1973 and today a modern 12 volt battery delivers reliable performance from a single unit.

With heavy duty twin 6 volt batteries retailing at £46.95 (sometimes reduced by Moss to £42.26) that's a total of £93.90 (£84.52) for two 6 volt batteries compared with a single high power 12 volt 063 typically costing £46.50.

**So you can save over £50!**

### What's in the kit?

Two shorter "J"pegs with plate washers, Nyloc nuts and washers for use with the existing battery clamp.

Two quick release battery terminal clamps with a protective epoxy coating.

One new earth cable.

One heavy brass inline battery cable connectors each with four grub screws and a heat shrinkable sleeve.

Hardwood dolly for flattening the angle upstand on the battery box floor.

Detailed conversion and fitting instructions.

Reusable 2 litre plastic packing box (from the Really Useful Box Company).

Including UK postage and packing.

Please note the **12 volt battery is not included in this kit** and is a separate purchase.

For details of the kit and the installation notes, see
