

## MGB V8 Roadster restoration project – Report 2

In the workshop at last! - my daughter's BMW 2002 Touring left my shed yesterday lunchtime and I managed to get the MGB in there. The first thing to do was to take some photos of as it in its present and then give it a quick clean, clear the muck out of the boot and interior and leave the heater on overnight to dry the MG out. I then took some more photos.

From memory of Dugald's MGBGV8, it appears to me that the V8 engine is mounted too high and not far enough back so I am making some enquiries of fellow V8 members including Roger Parker to see get their views. Engine number below.
