

Crankcase breather arrangement

Located behind and below the carburettor air box, the "T" piece for the rubber tubes venting each carburettor and, connecting to the lower end of the "T" piece, a third rubber tube which takes any petrol that might overflow down low so it is released away from the hot exhaust. The "T" piece is not easy to see and harder to get at.

To the right above, the rubber tube attached to a vent outlet from the carburettor – the tube then runs round the back of the carburettor air box and down to the "T" piece.

In the V8BB thread Jim Gibson mentioned "the crankcase breather parts are on plate **108-D65 "Carburettor Fittings - V8"** in the **MGB/V8 parts catalogue AKM0039**. A pipe from each carburettor joins a T-piece, **item 6** on the same page in the BL parts catalogue."
