

Nextbase402G dash cam – what does the recording look like?

Mike Howlett says “the video recording works very well, recording the journey in 3 minute long MOV files, about 350MB each. The picture quality is good as you can see from the single frame taken on the M6 over my bonnet with the RV8 style of bump. You don't even need any special software to view the movies on your PC with Windows Media Player (or similar) will work well. As the dash cam includes a GPS function the recordings are complete with GPS co-ordinates, your speed and compass direction”.
